Magellan to support Eastern Gas Pipeline Project

In June of this year, the team at Magellan was awarded a contract to supply Jemena's Eastern Gas Pipeline Expansion Project.

The contract will see Magellan Power supply a 240V AC Uninterruptible Power Supply (UPS) system to the Longford Compressor Station for Stage 2 of the Expansion project.

The system – one of Magellan's HPS series customized UPS systems – will be rated at 415Vac, 50Hz, with three phase input and 240Vac, single phase, 5KVA output.

Supplied with a battery charger and batteries that will support a 4 hour battery run time, the system is similar to a suite of four, recently supplied to the Australian Navy.

Business Development Manager, Carlos Zanlongo said he was delighted to be awarded the contract. "It is always good when you pick up big jobs like this, because it means the quality of our work is well respected," he said.

A Magellan Power HPS Series UPS

Product Feature – GE Digital Energy UPS

In a previous issue we announced our new distribution relationship with GE. As a GE distributor, Magellan Power has access to a wide range of standardized static UPS systems up to 6MVA. Some of the products in the GE range include:

The LanPro (LP) Series

The LP Series of UPS by GE is a comprehensive and high performance platform supplying information-quality power for critical applications. The LP Series is easy to install and service in a variety of applications and environments and can be integrated into office environments as well as industrial applications. Thanks to RPA™ (GE's exclusive Redundant Parallel Architecture) the system's power can be expanded by paralleling units, or the system's reliability can be increased by adding redundant units to create a totally redundant system with no single point of failure.

The SitePro (SP) Series

True Voltage and Frequency Independent (VFI) technology makes the GE Digital Energy SitePro® UPS one of the most reliable systems available for data security and other demanding critical applications.

SitePro UPS is a three-phase, on-line, intelligent system for centralized power protection. All SitePro UPS models operate in double conversion mode (providing true on-line operation) and are fully compliant with international standards regarding VFI operation.

To find out more about GE UPS, or to place and order, please contact us.

The LP11 (1-1 Phase) 3 to 10kVA

The LP31 (3-1 Phase) 8 to 20KvA

The LP33 (3-3 Phase) 10 to 30kVa

The SitePro UPS (3 Phase) 10-40 and 400-500 kVa

Meet our Technical Support Team

Whenever one of our customers finds themselves in need of some technical support or advice, they will invariably find themselves speaking to one of our technical support team: Jin Law, Raj Moturu or Adnan Khan.

Jin holds a Bachelor of Science (Electronics) and has been working in the electronics industry for over 20 years. Raj holds a Masters degree in Electronics Instrumentation and Telecommunications while Adnan holds a Masters degree in Controls. Collectively our team has more than 35 years in the industry.

In addition to their technical support responsibilities, Jin, Raj and Adnan are responsible for testing each and every Magellan Power product before it leaves the factory which means they know the Magellan Power product suite inside and out. As such, you can rest assured that you and your equipment are in great hands.

Originally from Malaysia and married with two teenage children Jin enjoys spending time with his family. Indian born Raj spends his weekends playing and watching cricket and dabbling in photography, while Adnan spends his spare time with his wife and very newborn son, Ehan.

Magellan Power customers in need of technical support or advice are invited to contact our team on 08 9434 6621, or email service@magellan-power.com.au.

The Magellan Power Technical Support Team (from L-R Adnan, Jin and Raj)
